

Hussam Ahmad

Date of birth: 01/01/2001 | Nationality: Syrian | Phone number: (+963) 935937548 (Mobile) | Github:

<https://github.com/HussamMAhmad> | Address: Tartous, Syria (Home)

EDUCATION AND TRAINING

16/05/2019 – 19/06/2025 Tartous, Syria

COMMUNICATIONS AND ELECTRONICS ENGINEERING

- The Technical Specialist

Full-Stack Developer | React, Next.js & Node.js

- The Backend Focused

Backend Engineer | Node.js, Express & Database Orchestration

- The Modern Web Developer

Software Engineer | TypeScript, Next.js & Scalable Web Architectures

- The Growth-Oriented

Full-Stack Developer | Building Secure, Automated & High-Performance Applications

WORK EXPERIENCE

FULL-STACK DEVELOPER – 01/01/2023 – Current – TARTOUS, SYRIA

Full-Stack Application Development: Designing and implementing end-to-end web applications using **React** and **Next.js** for the frontend, and **Node.js** for robust backend logic.

API Design & Integration: Building and consuming RESTful APIs and implementing secure authentication flows to ensure seamless communication between client and server.

SKILLS

JavaScript | work as a team | SQL | Microsoft Office | nextjs | nodejs | Type Script | Express | Tailwind | react | Rest API

PROJECTS

Modern PERN Stack Educational Dashboard

Designed and engineered a robust, data-driven administrative dashboard aimed at streamlining academic operations. The project focuses on managing multi-level educational entities through a modern, type-safe interface, ensuring high data integrity and efficient management workflows.

Key Technical Contributions:

- **Dynamic Data Orchestration:** Built a centralized management system for Departments, Classes, and Subjects, utilizing **Prisma ORM** to handle complex relational logic and ensure referential integrity within a **PostgreSQL** database.
- **Advanced UI/UX Implementation:** Developed a responsive and accessible interface using **Shadcn UI** and **Tailwind CSS**, featuring custom multi-select components and command-palette style search (via **CMDK**) for rapid data entry.
- **Rapid CRUD Development:** Leveraged the **Refine** framework to accelerate the development of create, read, update, and delete operations, maintaining a consistent and professional design language throughout the platform.
- **Strict Data Validation:** Implemented end-to-end type safety and form validation using **TypeScript**, **Zod**, and **React Hook Form**, significantly reducing runtime errors and improving user input accuracy.
- **Modular Architecture:** Structured the frontend using **Next.js** (or React) with a clean separation of concerns, facilitating easy scalability for future administrative modules.

Technical Stack:

- **Frontend:** React/Next.js, Refine Framework, Shadcn UI, Tailwind CSS.

- **Validation & State:** Zod, React Hook Form, TypeScript.
- **Backend & Database:** Node.js (Express), Prisma ORM, PostgreSQL.

Secure Subscription Engine (Dual-Database Implementation)

Developed a comprehensive full-stack application to track and manage service subscriptions, featuring automated notification workflows and robust security measures. **Engineered two distinct versions of the system** to evaluate and implement different data persistence strategies (SQL vs. NoSQL).

Key Technical Contributions:

- **Dual-Database Mastery:** Architected the system using both **MongoDB (Mongoose)** for flexible document-based storage and **PostgreSQL (Prisma ORM)** for structured relational data, ensuring optimized query performance in both environments.
- **Automated Notification Engine:** Integrated **Nodemailer** to build an automated alert system that triggers real-time email notifications for upcoming renewal dates and status changes.
- **Advanced Security Integration:** Implemented **Arcjet** for enterprise-level protection, deploying rate limiting and bot detection to secure subscription-related API endpoints.
- **Robust Backend Logic:** Developed complex subscription lifecycle logic (active, expired, upcoming) using **Node.js** and **Express.js**, maintaining high reliability across both database implementations.
- **Type-Safe Development:** Leveraged **TypeScript** across the entire stack to ensure data consistency and reduce production-level bugs during the transition between NoSQL and SQL architectures.

Technical Stack:

- **Databases:** PostgreSQL (Prisma), MongoDB (Mongoose).
- **Backend:** Node.js, Express.js, TypeScript, ES Modules.
- **Security & Tools:** Arcjet, Nodemailer, Axios.
